

UdaPeople CI/CD

Introducing CI/CD to our value proposition
By Nahuel Oroza

Why CI/CD?

How?

- CI/CD introduces a set of practices since early stages of our development process that leverage dramatically key dimensions of our business like:
 - Time
 - Revenue
 - Cost

Time

Less developer time
on issues from new
code

Revenue

Less time to market
Reduced downtime
from deploy-related
crash or major bug.

Cost

Less human error
Prevent security
holes

With CI/CD we
can better
support a
platform for
business
growth

Beyond
improved
results CI/CD
makes
developers
work better

- Roadmap to CI/CD includes
 1. Team training and workshops
 2. Enviroment set up
 3. Select and implement a Continuos Integration (CI) tool
 4. Select and implement a Continuos Deployment (CD) tool
 5. Design and implement deployment pipelines

Gains will
come to all
organization
teams not only
developers

- CI/CD helps to earn trust and reduce fear of rolling out new functionalities to production. Therefore also our teams across the organization will benefit by creating and seeing new ideas come true in less time.

Thanks!
